**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 12, 16, 17 and 20-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Lebens et al (6,095,661)

3. Lebens discloses a housing (fig 1) at least two light emitting diodes mounted with the housing generating a mechanically adjustable LED beam and serving as a light source and an adjustable switch coupled to a variable resistor for controlling the level of optical output wherein the switch is adapted to selectively turn on and off any select number of the at least two LEDs thereby allowing a user to choose from several different levels of illumination (col. 7 lines 10-15, 45-53, claim 34); a plurality of LED's are arranged concentrically around a single LED thereby forming a substantially circular

Art Unit: 2875

configuration (fig 1); the housing encloses a series of batteries operating as the power source for the flashlight; the switch operates as a step level variable control having at least two distinct levels of illumination (claims 31-34), the switch operates as a rheostat having continuous variable control thereby allowing selective levels of illumination (col. 7 lines 10-15); an electronic current regulator enclosed by the housing for allowing the LED beam to remain at a constant and desired light level (claim 31); a dynamic pulse control system (col. 5, lines 25-60)

***Allowable Subject Matter***

4. Claims 1-5 and 7-11 are allowed.
5. Claims 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter:
  - A reflector extending from an end of the housing for focusing and dispersing the at least two LED's to a desired light contour;
  - A housing, at least one light emitting diode mounted within the housing generating an LED beam and serving as a light source for the flashlight and dispersing the LED beam to a desired light contour and an adjustable switch coupled to a variable resistor for controlling the level of optical output.
